

THE TIME IS NOW: STAY AHEAD OF THE CURVE WITH JAN-PRO

Now more than ever, it is important to ensure a safe and clean environment for your employees and customers. We offer a thorough cleaning system using CDC approved hospital grade, broad spectrum disinfectants. We're a [highly reviewed](#) company where we provide our customers with satisfactory results.

WHAT WE CAN DO TO HELP WITH INFECTION PREVENTION:

ENVIROSHIELD—This is an **electrostatic disinfectant spray** that uses a series of different sprayer models for specific areas and applications. If your business is not being sprayed with this technology, your current disinfectant solution isn't nearly as effective. [See how it works!](#)

Perform deep/disinfectant cleans at your facility, cleaning high touch areas such as door knobs, computer desks, telephones, refrigerators, microwaves, sinks, and beyond.

Use hospital grade disinfectants that kills up to 99.9% of germs. [Click here to see how our disinfectant spray works!](#)

Cross Contamination Prevention—One of the biggest issues with germs and viruses is the issue of cross contamination. Here at Jan-Pro, we use microfiber cloths which are 99.94% effective in removing bacteria from smooth surfaces, as compared to conventional cloths and mops used with Lysol or bleach, which were only 91.89% effective *

We use different colored cloths so that were not moving germs to different areas. For example, we wouldn't use the same color cloth if we went from wiping a bathroom light switch to a desktop computer.

[Read our blog on cross contamination prevention here!](#)

Hepa-Filter Vacuums- We use HEPA vacuums which stands for High Efficiency Particulate Air that is able to trap 99.97% of particles that are 0.3 microns. [See how they work. †](#)

Flat-Mops—Our flat microfiber mops leaves floors streak free without slinging dirty water on your baseboards.
